**Vincent P. Barabba**, Director

**Daniel B. Levine**, Deputy Director

**Shirley Kallek**, Associate Director for  
Economic Fields

**Richard B. Quanrud**, Assistant Director for  
Economic and Agriculture Censuses

## ECONOMIC SURVEYS DIVISION

**Roger Bugenhagen**, Chief

**ACKNOWLEDGMENTS**—Many persons participated in the various activities of the 1977 Census of Transportation. Primary direction of the program was performed by Shirley Kallek, Associate Director for Economic Fields, and Richard B. Quanrud, Assistant Director for Economic and Agriculture Censuses.

This report was prepared in the Economic Surveys Division under the general direction of Roger H. Bugenhagen, Chief. Robert E. Crowther, Assistant Chief for Census Programs, was responsible for overall planning and management of the Division's census programs; he also coordinated activities with other divisions.

Planning and implementing this report were under the direction of Robert Torene, Chief, Transportation Branch, with primary staff assistance by Carmen Campbell, Joseph K. Tintera, Timothy P. Smith, H. Laverne Smith, and Evelyn S. Davis. Computer programs were developed under the general supervision of Andrew L. Grieco, Assistant Division Chief for Data Processing. Charles A. Venters, Chief, Economic Programming Branch, assisted by James L. Kirk, Michael L. Wilson, and Frank Frederick, was primarily responsible for planning and implementing the programs. Quality control and sample design were under the direction of Joel W. Richardson, Chief, Methods and Research Staff, with primary staff assistance by Alan Tupek and Edwin L. Robison. Data input procedures were developed by Leonard M. Tauber and John F. Mazzullo. Processing and computer coordination were performed by Dorcas Dupree and Peter T. Bruno.

Forms design was performed in the Administrative Services Division, Henry J. Husmann, Chief. The entire staff of the Forms and Mail Management Branch made significant contributions in the planning, design, review, and composition of the forms.

Within the Publications Services Division, many individuals made significant contributions in publication planning and design, editorial review, composition, and printing procurement. These operations were performed under the direction of Raymond J. Koski, Chief, assisted by Milton S. Andersen, Gerald A. Mann, Wayne H. Massey, Helen M. Curtis, Jacqueline A. Gans, Charles C. Huntley, Nicholas Preftakes, Rosemary B. Vance, and Robert Warunek.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Ind., under the direction of Don L.

Adams, Chief, assisted by Robert L. Allen, Rebecca Nesbit, and George Wilson.

The geographic coding procedures and computer programs were developed in the Geography Division under the direction of Jacob Silver, Chief, assisted by Silla G. Tomasi, Gerald Cranford, Terence D. McDowell, Dan Harding, Phyllis Krause, Walter Yergen, and Ross J.A. Quarato.

Computer processing was directed by C. Thomas DiNenna, Chief, Computer Services Division. John E. Halterman, Jesse J. Verdeja, Willie E. Clark, and Norman W. Larsen provided staff assistance.

Donald E. Young, Lawrence H. Lyons, Robert S. Taylor, and Dayton P. Jorgenson, of the Office of the Assistant Director for Economic and Agriculture Censuses, participated in overall planning and review of the census operations.

Special acknowledgment is also due the many respondents whose cooperation has contributed to the publication of these data.

## INTRODUCTION

The economic censuses provide the most comprehensive and detailed information available on the Nation's industrial and business activities. They are designed to furnish data which can be used to analyze the structure and functioning of the economy and to measure its growth and change over time. The data are collected at intervals of five years, and the results are used by government, business, and other organizations to plan and evaluate their operations.

### HISTORY OF THE ECONOMIC CENSUSES

The economic censuses are comprehensive and periodic canvasses of the Nation's industrial and business activities. Taken by the Census Bureau, a part of the U.S. Department of Commerce, the censuses provide a detailed statistical profile of a large segment of the national economy.

The first economic census of the United States was conducted as part of the 1810 decennial census, when inquiries on manufacturing were included with the census of population. All other decennial censuses through 1900, except in 1830, contained questions on manufacturing. In 1904 the quinquennial census of manufacturing began. Although some distributive trade data were collected in the decennial census of 1840, the first census of business was taken in 1929. It covered only retail and wholesale trades, but beginning with the second business census in 1933 and in succeeding censuses various services also have been included. The censuses were taken at varying intervals until 1954, when an integrated economic census program was begun covering the retail and wholesale trades, selected service industries, manufactures, and minerals industries. The 1963 Economic Censuses were expanded to include transportation and commercial fisheries. Beginning with the 1967 censuses, Congress authorized the economic censuses to be taken at 5-year intervals covering years ending in "2" and "7".

### USES OF THE ECONOMIC CENSUSES

The economic censuses are the primary source of facts about the structure and functioning of the economy and, therefore, provide information essential for both government and business. The censuses furnish an important part of the framework for such composite measures as the national accounts. In forecasting and planning, they are especially useful in analyzing the national product in terms of the transactions that determine its size and composition. The economic censuses also provide weights and benchmarks for indexes of industrial production, productivity, and price, all of which are essential for understanding current economic developments.

Manufacturers and distributors make widespread use of the economic censuses in establishing measures of their potential markets by areas, kinds of businesses, and kinds of products. Management in various industries and trades get facts from them for use in economic or sales forecasting, analyzing sales performance, laying out sales territories, allocating advertising budgets, and locating plants, warehouses, and stores. Trade organizations use census statistics for insight into changes in the structure of industry. State and local governments use the

geographic detail that describes the patterns of economic change in individual communities.

Following every census, reports are purchased by thousands of businesses and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press. Volumes containing census statistics are available in most major public and college libraries.

### AUTHORITY AND SCOPE OF THE ECONOMIC CENSUSES

The economic censuses are required by law under title 13 of the United States Code, sections 131, 191, and 224, which direct that they be taken at 5-year intervals. The 1977 Economic Censuses covered manufacturing, mining and quarrying, construction industries, retail trade, wholesale trade, service industries, and selected transportation activities. The next economic censuses are scheduled to be taken in 1983 covering the year 1982.

### CENSUS OF TRANSPORTATION

The 1977 Census of Transportation consists of four surveys:

1. Truck Inventory and Use.
2. National Travel.
3. Commodity Transportation.
4. Nonregulated Motor Carriers and Public Warehousing.

These surveys were previously taken in 1963, 1967, and 1972.

### TRUCK INVENTORY AND USE SURVEY

The Truck Inventory and Use Survey provides data on the physical and operational characteristics of the Nation's truck population. It is based on a probability sample of private and commercial trucks registered (or licensed) in the State during 1977.<sup>1</sup>

Vehicles owned by Federal, State, and local governments, as well as ambulances, buses, and motor homes, were eliminated from the sample before questionnaires were mailed. Various other vehicles which were actually surveyed were subsequently classified as "out-of-scope". Trucks sold prior to 1977, farm tractors, open jeep models, unpowered trailer units, trucks reported to have been junked or wrecked prior to the registration year, etc. For the first time, however, certain small utility-type vehicles built on pickup and van chassis were

<sup>1</sup> Because of variances in registration procedures, Oklahoma's sample was drawn from 1978 registrations.

included in the sample. Many States allow pickups and small vans to be registered as cars or trucks; therefore, the passenger car files were searched and any such trucks were included in the sample universe. Some privately or commercially owned vehicles do not have to be licensed, such as "off-highway" trucks used exclusively on private property, and since they had no chance of being drawn in the sample, they are not covered in the survey.

## TOTAL TRUCK INVENTORY

The estimated number of trucks that were within the scope of the TIU Survey and registered in the State as of July 1, 1977, was 484.5 thousand.

This estimate serves as the benchmark to which the survey results were adjusted to produce the more detailed estimates contained in this report. It was developed through a review of the characteristics of each vehicle registered in the State.

All previous TIU surveys were benchmarked to Federal Highway Administration (FHWA) totals of private and commercial truck registrations as reported in Highway Statistics, table MV-1. These FHWA estimates are based on calendar year summary reports from the individual States that reflect differences in truck definitions used by the States for vehicle registration.

The FHWA estimate of the number of private and commercial trucks registered in the State as of December 31, 1977, was 655.5 thousand.

## COMPARABILITY WITH PREVIOUS SURVEYS

Although the basic purpose and scope of the previous TIU surveys were essentially identical to this one, some changes were introduced in 1977 that may affect all the data in this report or just specific items.

### 1977 changes affecting all the data

1. The estimates developed for the total inventory for a State are no longer adjusted by the FHWA data. For 1977, the universe estimates represent the base from which the sample was drawn (see Total Truck Inventory).
2. The item-by-item computer edit was extended to perform various consistency checks between data entries in an effort to identify and correct major errors and/or contradictions in reporting.
3. Stratification was based upon "small" vs. "large" trucks (body type) rather than "light" vs. "heavy" trucks (registered weight) as in previous surveys. The sample was reallocated among the States with an increase in total sample size of 4 percent. Random sampling replaced the systematic sampling of the 1972 survey.

### 1977 changes affecting specific items<sup>1</sup>

1. Item 4, Lease characteristics—Additional questions were asked concerning any lessee of the sampled truck and the nature of the lease or rental agreement.

2. Item 5, Classification of operator—Respondents were asked to classify their operations according to "not for hire" (either a private individual or a business transporting its own goods or services) or "for hire" (interstate or intrastate carriers).
3. Item 6, Major use of the truck or combination—Wholesale and retail trades were made separate items and an entry for daily rental/short term lease operations was added.
4. Item 7, Products carried—Trucks used for personal transportation, as craftsman's vehicles, or with special equipment (cranes, winches, etc.) each had their own entry; in 1972 they were treated collectively. Respondents were also asked to identify a secondary product carried, if any.
5. Item 8, Hazardous materials—This item was added to determine the extent of hazardous materials (as defined by Federal regulations) being transported in the Nation.
6. Item 9, Base of operation, and Item 11, Area of operation—Both items were expanded to provide more precise information concerning the percentage of miles traveled within the State where the sampled truck was based and the range of that travel. In addition to "local" and "over-the-road," an "off-the-road" category was included.
7. Item 12, Vehicle miles and miles per gallon—For the first time, an effort was made to determine fuel efficiency figures for trucks in addition to annual and lifetime miles.
8. Item 13, Maintenance—Specific examples of "major maintenance" were listed along with the previous question on where such maintenance was performed.
9. Item 15-20, Various physical characteristics—In an effort to get a more detailed picture of each sampled truck, several new questions were added covering number of cylinders, cubic inch displacement, horsepower rating, type of transmission and braking system, fuel conservation equipment, etc.
10. Item 21, Type and size of body—Boat transports and mobile home pullers were added to the list and lowboys were made a separate category (rather than being included with other platforms). Garbage haulers and cement mixers were given subgroups according to the various models generally in use.
11. Item 25, Cab type—This item was expanded to five of the most common cab types. It also inquired whether the sampled cab contained a sleeping unit.

## EXPLANATION OF TERMS

**Vehicle size**—The size classification is based on the gross vehicle weight (empty weight of the vehicle plus the maximum carried load) at which the vehicle operated during the past 12 months. The four size classes are:

1. Light—Gross vehicle weight of 10,000 pounds or less.
2. Medium—Gross vehicle weight of 10,001 to 19,500.
3. Light-heavy—Gross vehicle weight of 19,501 to 26,000.
4. Heavy-heavy—Gross vehicle weight of 26,001 pounds or more.

<sup>1</sup> See report form TC-200 reproduced in appendix A for specific information requested for each truck in sample.

**Operator classification**—This item consists of two major categories, not for hire and for hire:

**Not for hire**—Includes a private owner or a company which transports its own materials or merchandise.

**For hire**

1. Interstate, exempt carrier, includes those operators who are not required to have an I.C.C. certificate because they transport only exempt commodities or operate in an exempt zone.
2. Interstate, I.C.C. certified contract carrier, includes those operators who carry the goods of someone other than the vehicle owner by individual contract or agreement.
3. Interstate, I.C.C. certified common carrier, includes those operators who offer service to the general public, usually operating a regularly scheduled service between established terminals over a more or less regular route.
4. Intrastate, Local cartage, includes those operators who travel only within the State of registration or are engaged in local cartage.
5. Daily rental includes those operators who offer short term truck rental or leasing without a driver. (This category was created during the data processing of the survey forms. Respondents who checked "daily rental or short term lease" under the "major use" item were assigned "daily rental" under "classification of operator.")

**Major use**—This item is based on the answer to the question, "How was the vehicle mostly used during the past 12 months?" (see item 6 of the survey form in appendix A). Each of the 12 specific major use categories conforms to the generally accepted meaning of the terms. Responses to the "Other" category were recoded to one of the 12 specific categories if possible. The following are frequent "Other" responses which were recoded.

1. House moving was recoded to "For hire transportation."
2. Trucks used in conjunction with railroads were recoded to "For hire transportation."
3. Armored car services were recoded to "Services."
4. Commercial fishing was recoded to "Agriculture."
5. Oilfield services were recoded to "Mining and quarrying."
6. Certain specialized activities commonly thought of as services, such as plumbing, painting, plastering, carpentry, and electrical work, were recoded to "Construction."

U.S. mail service, United Parcel Service delivery, antique trucks, and yard tractors were left in "Other."

The category "Not in Use" in the tables includes vehicles which, though licensed, were not used during the survey year, and those vehicles which were wrecked during the entire year.

**Products carried**—This item includes broad classifications of agricultural, manufacturing, and mineral products, as well as special categories of materials carried by trucks. Responses to the "Other" category were recoded to one of the 22 specific categories if possible. The following are frequent "Other" responses which were recoded:

1. Crews of workers and their tools were recoded to "Craftsman's vehicle."

2. Flowers, trees, shrubs, etc., were recoded to "Farm products."

3. Animal by-products were recoded to "Scrap, refuse, or garbage."

4. Clay was recoded to "Mining products."

5. Auto parts (including tires) were recoded to "Transportation equipment."

Dirt, sporting goods, caskets, unspecified fiber glass products, house moving, and manufactured plastic products were left in "Other."

**Hazardous materials**—This category was designed to identify those trucks which regularly transport hazardous materials in quantities large enough to require a placard under the Code of Federal Regulations, Title 49, Transportation.

**Truck fleet size**—The size of the truck fleet is based on the number of trucks operated by a truck owner from a single "base of operation" (see item 9 of the survey form in appendix A). The fleet located at the "base of operation" is an operational unit and is necessarily smaller than the total fleet that an owner has if he operates from more than one base. The data shown in the "Truck Fleet Size" section of the tables are based on the number of trucks found in fleets of specified size and not the number of fleets. (If item 10 of the survey form was unanswered, the vehicle was assumed to be in a fleet of one, classified in accordance with the reported vehicle type.)

**Range of operation**—The area in which the vehicle usually operates is classified as one of the following:

1. Local—Mostly in the local area, i.e., in or around the city and suburbs, or within a short distance of the farm, factory, mine, or other place where the vehicle is stationed.
2. Short range—Mostly over the road (beyond the local area), but usually not more than 200 miles one way to the most distant stop from the place where the vehicle is stationed.
3. Long range—Mostly over the road, usually more than 200 miles one way to the most distant stop from the place where the vehicle is stationed.
4. Off-the-road—Mostly off the road operation (usually associated with construction and farming).

**Body type**—This category includes the type of body that is either permanently attached to the power unit (i.e., straight truck) or most frequently used with a truck tractor as a tractor-trailer combination. Entries in the "Other" category were recoded if possible to a specific category. Those vehicles remaining in the "Other" category included yard tractors and truck tractors used in house moving.

**Annual miles**—Respondents were asked to report the total number of miles the truck was driven during the past 12 months. If the vehicle had less than 1 year's use, the respondent was asked to estimate the probable miles for a full year. If there was no response to the item, the annual miles were estimated (based on lifetime miles, length of time the vehicle was owned, body type, area of operation, vehicle type, and fuel type).

## SAMPLE DESIGN

The Truck Inventory and Use Survey (at the national level) was based on a stratified probability sample of about 117,000 trucks drawn from an estimated universe of approximately 28 million current registrations on file with motor vehicle departments in the 50 States and the District of Columbia.

The first stratification was at the State level based on the total number of trucks registered annually. There were three major strata:

1. Large States—over 1.5 million trucks.
2. Medium States—700,000 to 1.5 million trucks.
3. Small States—Less than 700,000 trucks.

The second stratification was based on body type. Each State was stratified into "small" trucks and "large" trucks. The "small" truck stratum consisted of pickups, panel trucks, vans, multi-stops, and walk-ins with a gross vehicle weight of 14,000 pounds or less. All other vehicles were classified as "large." Within each stratum, a random sample of vehicles was selected.

The allocation of the sample within the States was based on setting levels which would produce the best estimates in a published category. From previous experience, it was determined that a level sample of 600 trucks from the small truck stratum would be sufficient in every State except California, Texas, and the District of Columbia.

In the large truck stratum, a differential sampling rate was employed based on the percentage of large trucks in the State. In the two largest States, 3,000 large trucks were sampled. In the medium States, 2,200 were sampled. The other States had large truck sample sizes of 2,000, 1,600, or 1,200 depending upon the percentage of large trucks in each State's truck population. A total of 900 large trucks were sampled from the District of Columbia. Specific target sample sizes by State are listed below.

## SURVEY METHOD

Report Form TC-200 was mailed to owners of those trucks selected for the 1977 TIU sample. The owner was asked to respond only for the vehicle identified by license number in item 1 of the report form, whether or not he or she was still the owner. Item 1 data (make, year model, registered weight, license number, vehicle identification number) were imprinted on the form from the State registration records. The returned

questionnaires were manually edited and coded. The information received was data-keyed and processed through an extensive computer edit. Reports which contained questionable responses were referred and corrected if necessary. Estimates of the number of trucks with each characteristic were obtained by expanding the sampled units to the State truck population level.

## RELIABILITY OF ESTIMATES

The figures shown in this report are estimated from a sample and will differ from the figures which would have been obtained from a complete census. Two types of possible errors are associated with estimates based on data from sample surveys: Sampling errors and nonsampling errors. The accuracy of a survey result depends not only on the sampling errors and nonsampling errors measured, but also on the nonsampling errors not explicitly measured.

For particular estimates, the total error may considerably exceed the standard errors shown. The following is a description of the sampling and nonsampling errors associated with the estimates made from the sample selected for the 1977 Truck Inventory and Use Survey.

**Sampling errors**—The particular sample used in this survey is one of a large number of all possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. The standard error or sampling error is a measure of the variation among the estimates from all possible samples.

The standard errors presented in the tables estimate the sampling variability and thus measure the precision with which the estimate from the particular sample selected for this survey approximates the average result of all possible samples. As derived, the estimated standard errors include part of the effect of the nonsampling errors.

Sampling errors in these tables are given in absolute terms. For example, if an estimate is in units of thousands then the estimated standard error is given in units of thousands. Except for table 2, estimated standard errors are given only for the top row of estimates and the left column of estimates. The procedure for approximating the standard errors for the other estimates is covered in appendix B.

The sample estimate and an estimate of its standard error can be used to construct interval estimates with a prescribed confidence that the interval includes the average result of all

Trucks in target sample

		Trucks in target sample			
	Total	Total	Per State		
				Large	Small
Large States .....	8,000	4,000	3,000	1,000	
Medium States ...	28,000	2,800	2,200	600	
Small States .....	10,400	2,600	2,000	600	
	41,800	2,200	1,600	600	
	27,000	1,800	1,200	600	
	1,200	1,200	900	300	

States in strata

- 2—Calif., Tex.
- 10—Fla., Ga., Ill., Ind., Mich., Mo., N.Y., Ohio, Okla., Pa.,
- 4—N.J., N.C., N. Dak., Oreg.
- 19—Ala., Conn., Del., Hawaii, Iowa, Kans., Ky., La., Md., Mass., Minn., Mont., Neb., N.H., R.I., S.C., S. Dak., Wyo., Va.
- 15—Alaska, Ark., Ariz., Colo., Idaho, Maine, Miss., Nev., N. Mex., Tenn., Utah, Vt., Wash., Wis., W. Va.
- 1—D.C.

samples. To illustrate, if all possible samples were surveyed under essentially the same conditions, and an estimate and its estimated standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average value of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average value of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average value of all possible samples.

*Example—The estimated number of pickup trucks in construction for a State is 15.0 thousand with a standard error of 2.0 thousand. An approximate 90 percent confidence interval (plus or minus 1.6 standard errors) is from 11.8 thousand trucks to 18.2 thousand trucks.*

Other types of estimates may be derived from these tables, such as the difference, sum, or ratio of two estimates, or the expression of a published figure as a percent. The procedure for approximating the standard error of these estimates is covered in appendix C.

**Nonsampling errors**—All surveys and censuses are subject to nonsampling errors. Nonsampling errors can be attributed to many sources: Inability to obtain responses from all cases in the sample, inability or unwillingness on the part of respondents to provide correct information, imputation for item nonresponse, response errors and bias, mistakes in recording or keying data, errors of collection or processing, difficulty interpreting questions, and coverage problems due to differing registration practices and implementation in some of the States. In addition to response errors, some degree of response variability is introduced when respondents estimate values.

Explicit measures of the effects of these nonsampling errors

are not available. However, it is believed that most of the important operational and response errors were detected and corrected through a systematic clerical edit and an automated data edit designed to review the data for reasonableness and consistency. Quality control techniques were used to verify that operating procedures were carried out as specified.

Nearly all types of nonsampling errors that affect this survey would also occur in a complete census. Since surveys are conducted on a smaller scale than censuses, nonsampling errors can be controlled more tightly. Relatively more funds and effort can be expended toward eliciting responses, detecting and correcting response error, and reducing processing errors. As a result, survey results can often be more accurate than census results.

Ninety percent of the questionnaires were returned, with item response rates in excess of 95 percent for most of the major questions. For most estimates in these tables, total nonresponse is handled by allocating the unreturned questionnaires in proportion to the respondents. For each category in the tables, the item nonresponse (respondents not answering the item on the questionnaires) is given on a separate line. For example, respondents who did not indicate the major use of their truck are included in the "Not reported" category. The number given represents the number of trucks not allocated to a particular major use. Users should exercise caution in allocating these trucks to the major uses, since the characteristics of item nonrespondents may differ significantly from those of the respondents.

For some questions, a response was generated to fill a blank on the questionnaire. If annual miles and/or lifetime miles were not given, data were always imputed. When only the annual miles were not given they were imputed based on the reported lifetime miles and the age of the vehicle. When only the lifetime miles were not given, they were imputed based on the reported annual miles and the age of the vehicle. If both questions were left blank, the characteristics used to aid in imputation were body type, age of vehicle, vehicle size, and engine type. Engine characteristics and body characteristics were frequently determined through analysis of the vehicle identification number (VIN). Any biases introduced by the imputation and correction procedures are small compared to the standard errors involved.

NOTE: DATA RELATE TO STATE OF REGISTRATION, WHICH IN MOST CASES IS BASE OF OPERATION; HOWEVER, SOME TRUCKS REGISTERED IN A GIVEN STATE ARE ACTUALLY BASED IN ANOTHER STATE BECAUSE THEY OPERATE INTERSTATE OR THEIR OPERATORS HAVE MOVED TO ANOTHER STATE. DETAILED FIGURES MAY NOT ADD TO TOTALS BECAUSE OF ROUNDING. STANDARD ERROR IS AN ACTUAL NUMBER; FOR DISCUSSION OF PROPER USE AND INTERPRETATION, SEE INTRODUCTION.

- ESTIMATE IS LESS THAN 50 TRUCKS.

<sup>1</sup>WHEN NO RESPONSE WAS OBTAINED FOR ANNUAL MILES, DATA WERE IMPUTED.

<sup>2</sup>DETAIL DOES NOT ADD TO TOTALS BECAUSE ITEMS WERE NOT APPLICABLE OR MULTIPLE RESPONSES WERE POSSIBLE.

<sup>3</sup>WHEN NO RESPONSE WAS OBTAINED, ONE TRUCK WAS IMPUTED BASED ON BODY TYPE OF SAMPLED VEHICLE.

<sup>4</sup>BECAUSE SOME "LIGHT" TRUCK RESPONDENTS WERE UNFAMILIAR WITH BRAKING SYSTEM TERMINOLOGY, A LARGE PROPORTION OF DATA FOR "OTHER" SHOULD BE FOR "HYDRAULIC" (E.G., DATA ON POWER ASSISTED BRAKES, DISC BRAKES, VACUUM-HYDRAULIC, ETC.).

<sup>5</sup>DATA RELATE ONLY TO SPECIFIED EQUIPMENT ON WHICH MAINTENANCE WAS PERFORMED.

<sup>6</sup>PICKUPS, PANELS, VANS, AND MULTISTOPS ARE NOT INCLUDED.

NOTE: DATA RELATE TO STATE OF REGISTRATION, WHICH IN MOST CASES IS BASE OF OPERATION; HOWEVER, SOME TRUCKS REGISTERED IN A GIVEN STATE ARE ACTUALLY BASED IN ANOTHER STATE BECAUSE THEY OPERATE INTERSTATE OR THEIR OPERATORS HAVE MOVED TO ANOTHER STATE. DETAILED FIGURES MAY NOT ADD TO TOTALS BECAUSE OF ROUNDING. STANDARD ERROR IS AN ACTUAL NUMBER; FOR DISCUSSION OF PROPER USE AND INTERPRETATION, SEE INTRODUCTION.

\* ESTIMATE IS LESS THAN 50 TRUCKS.

<sup>1</sup>WHEN NO RESPONSE WAS OBTAINED FOR ANNUAL MILES, DATA WERE IMPUTED. WHEN NO RESPONSE WAS OBTAINED, MULTIPLE RESPONSES WERE POSSIBLE.

<sup>2</sup>DETAIL DOES NOT ADD TO TOTALS BECAUSE ITEMS WERE NOT APPLICABLE OR MULTIPLE RESPONSES WERE POSSIBLE.

<sup>3</sup>WHEN NO RESPONSE WAS OBTAINED, ONE TRUCK WAS IMPUTED BASED ON BODY TYPE OF SAMPLED VEHICLE.

<sup>4</sup>BECAUSE SOME "LIGHT" TRUCK RESPONDENTS WERE UNFAMILIAR WITH BRAKING SYSTEM TERMINOLOGY, A LARGE PROPORTION OF DATA FOR "MOTHER" SHOULD BE FOR "HYDRAULIC" (E.G., DATA ON POWER ASSISTED BRAKES, DISC BRAKES, VACUUM-HYDRAULIC, ETC.).

<sup>5</sup>DATA RELATE ONLY TO SPECIFIED EQUIPMENT ON WHICH MAINTENANCE WAS PERFORMED.

<sup>6</sup>PICKUPS, PANELS, VANS, AND MULTISTOPS ARE NOT INCLUDED.

Table 4. Trucks by Size: 1977

CAMPER BODY.	6.4	2.3	6.3	.1	-	-
NOT REPORTED	348.4	7.1	343.2	5.1	.2	-

NOTE: DATA RELATE TO STATE OF REGISTRATION, WHICH IN MOST CASES IS BASE OF OPERATION; HOWEVER, SOME TRUCKS REGISTERED IN A GIVEN STATE ARE ACTUALLY BASED IN ANOTHER STATE BECAUSE THEY OPERATE INTERSTATE OR THEIR OPERATORS HAVE MOVED TO ANOTHER STATE. DETAILED FIGURES MAY NOT ADD TO TOTALS BECAUSE OF ROUNDING. STANDARD ERROR IS AN ACTUAL NUMBER; FOR DISCUSSION OF PROPER USE AND INTERPRETATION, SEE INTRODUCTION.

- ESTIMATE IS LESS THAN 50 TRUCKS.

<sup>a</sup>WHEN NO RESPONSE WAS OBTAINED FOR ANNUAL MILES, DATA WERE IMPUTED.

<sup>b</sup>DETAIL DOES NOT ADD TO TOTALS BECAUSE ITEMS WERE NOT APPLICABLE OR MULTIPLE RESPONSES WERE POSSIBLE.

<sup>c</sup>WHEN NO RESPONSE WAS OBTAINED, ONE TRUCK WAS IMPUTED BASED ON BODY TYPE OF SAMPLED VEHICLE.

<sup>d</sup>BECAUSE SOME "LIGHT" TRUCK RESPONDENTS WERE UNFAMILIAR WITH BRAKING SYSTEM TERMINOLOGY, A LARGE PROPORTION OF DATA FOR "OTHER" SHOULD BE FOR "HYDRAULIC" (E.G., DATA ON POWER ASSISTED BRAKES, DISC BRAKES, VACUUM-HYDRAULIC, ETC.).

<sup>e</sup>DATA RELATE ONLY TO SPECIFIED EQUIPMENT ON WHICH MAINTENANCE WAS PERFORMED.

<sup>f</sup>PICKUPS, PANELS, VANS, AND MULTISTOPS ARE NOT INCLUDED.

NOTE: DATA RELATE TO STATE OF REGISTRATION, WHICH IN MOST CASES IS BASE OF OPERATION; HOWEVER, SOME TRUCKS REGISTERED IN A GIVEN STATE ARE ACTUALLY BASED IN ANOTHER STATE BECAUSE THEY OPERATE INTERSTATE OR THEIR OPERATORS HAVE MOVED TO ANOTHER STATE. DETAILED FIGURES MAY NOT ADD TO TOTALS BECAUSE OF ROUNDING. STANDARD ERROR IS AN ACTUAL NUMBER; FOR DISCUSSION OF PROPER USE AND INTERPRETATION, SEE INTRODUCTION.

\* ESTIMATE IS LESS THAN 50 TRUCKS.

<sup>1</sup>WHEN NO RESPONSE WAS OBTAINED FOR ANNUAL MILES, DATA WERE IMPUTED.

<sup>2</sup>DETAIL DOES NOT ADD TO TOTALS BECAUSE ITEMS WERE NOT APPLICABLE OR MULTIPLE RESPONSES WERE POSSIBLE.

<sup>3</sup>WHEN NO RESPONSE WAS OBTAINED, ONE TRUCK WAS IMPUTED BASED ON BODY TYPE OF SAMPLED VEHICLE.

<sup>4</sup>BECAUSE SOME "LIGHT" TRUCK RESPONDENTS WERE UNFAMILIAR WITH BRAKING SYSTEM TERMINOLOGY, A LARGE PROPORTION OF DATA FOR "OTHER" SHOULD BE FOR "HYDRAULIC" (E.G., DATA ON POWER ASSISTED BRAKES, DISC BRAKES, VACUUM-HYDRAULIC, ETC.).

<sup>5</sup>DATA RELATE ONLY TO SPECIFIED EQUIPMENT ON WHICH MAINTENANCE WAS PERFORMED.

<sup>6</sup>PICKUPS, PANELS, VANS, AND MULTISTOPS ARE NOT INCLUDED.

NOTE: DATA RELATE TO STATE OF REGISTRATION, WHICH IN MOST CASES IS BASE OF OPERATION; HOWEVER, SOME TRUCKS REGISTERED IN A GIVEN STATE ARE ACTUALLY BASED IN ANOTHER STATE BECAUSE THEY OPERATE INTERSTATE OR THEIR OPERATORS HAVE MOVED TO ANOTHER STATE. DETAILED FIGURES MAY NOT ADD TO TOTALS BECAUSE OF ROUNDING. STANDARD ERROR IS AN ACTUAL NUMBER; FOR DISCUSSION OF PROPER USE AND INTERPRETATION, SEE INTRODUCTION.

<sup>a</sup> ESTIMATE IS LESS THAN 50 TRUCKS.

<sup>1</sup> WHEN NO RESPONSE WAS OBTAINED FOR ANNUAL MILES, DATA WERE IMPUTED.

<sup>2</sup> DETAIL DOES NOT ADD TO TOTALS BECAUSE ITEMS WERE NOT APPLICABLE OR MULTIPLE RESPONSES WERE POSSIBLE.

<sup>3</sup> WHEN NO RESPONSE WAS OBTAINED, ONE TRUCK WAS IMPUTED BASED ON BODY TYPE OF SAMPLED VEHICLE.

<sup>4</sup> BECAUSE SOME "LIGHT" TRUCK RESPONDENTS WERE UNFAMILIAR WITH BRAKING SYSTEM TERMINOLOGY, A LARGE PROPORTION OF DATA FOR "OTHER" SHOULD BE FOR "HYDRAULIC" (E.G., DATA ON POWER ASSISTED BRAKES, DISC BRAKES, VACUUM-HYDRAULIC, ETC.)

<sup>5</sup> DATA RELATE ONLY TO SPECIFIED EQUIPMENT ON WHICH MAINTENANCE WAS PERFORMED.

<sup>6</sup> PICKUPS, PANELS, VANS, AND MULTISTOPS ARE NOT INCLUDED.

CAMPER BODY	6.4	2.3	6.4	6.4	-	-	-	-	-	-	-
NOT REPORTED	348.4	7.1	348.4	348.4	-	-	-	-	-	-	-

NOTE: DATA RELATE TO STATE OF OPERATION, WHICH IN MOST CASES IS BASE OF OPERATION; HOWEVER, SOME TRUCKS REGISTERED IN A GIVEN STATE ARE ACTUALLY BASED IN ANOTHER STATE BECAUSE THEY OPERATE INTERSTATE OR THEIR OPERATORS HAVE MOVED TO ANOTHER STATE. DETAILED FIGURES MAY NOT ADD TO TOTALS BECAUSE OF ROUNDING. DETAILED FIGURES MAY NOT ADD TO TOTALS BECAUSE OF ROUNDING. STANDARD ERROR IS AN ACTUAL NUMBER; FOR DISCUSSION OF PROPER USE AND INTERPRETATION, SEE INTRODUCTION.

- ESTIMATE IS LESS THAN 50 TRUCKS.

<sup>1</sup>WHEN NO RESPONSE WAS OBTAINED FOR ANNUAL MILES, DATA WERE IMPUTED.

<sup>2</sup>DETAIL DOES NOT ADD TO TOTALS BECAUSE ITEMS WERE NOT APPLICABLE OR MULTIPLE RESPONSES WERE POSSIBLE.

<sup>3</sup>WHEN NO RESPONSE WAS OBTAINED, ONE TRUCK WAS IMPUTED BASED ON BODY TYPE OF SAMPLED VEHICLE.

<sup>4</sup>BECAUSE SOME "LIGHT" TRUCK RESPONDENTS WERE UNFAMILIAR WITH BRAKING SYSTEM TERMINOLOGY, A LARGE PROPORTION OF DATA FOR "OTHER" SHOULD BE FOR "HYDRAULIC" (E.G., DATA ON POWER ASSISTED BRAKES, DISC BRAKES, VACUUM-HYDRAULIC, ETC.).

<sup>5</sup>DATA RELATE ONLY TO SPECIFIED EQUIPMENT ON WHICH MAINTENANCE WAS PERFORMED.

<sup>6</sup>PICKUPS, PANELS, VANS, AND MULTISTOPS ARE NOT INCLUDED.

## APPENDIX A. Survey Form

DUE DATE IS 15 DAYS AFTER RECEIPT OF FORM

Form TC-200  
(1-81-77)U.S. DEPARTMENT OF COMMERCE  
BUREAU OF THE CENSUS

Form Approved: D.M.B. Number 41-576075

### TRUCK INVENTORY AND USE SURVEY

#### 1977 CENSUS OF TRANSPORTATION

##### INSTRUCTIONS

In correspondence pertaining to this report, please include State and license number and the control number shown in the address label. Return the form in the enclosed preaddressed envelope not later than 15 days after receipt.

**RETURN TO**

 Bureau of the Census  
 1201 East 10th Street  
 Jeffersonville, Indiana 47132

**NOTICE** — Response to this inquiry is required by law (Title 13, U.S. Code). By the same law your report to the Census Bureau is confidential. It may be used only by sworn Census employees and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

In correspondence pertaining to this report, please refer to this control number

(Please correct any error in name and address including ZIP code)

##### Section A - VEHICLE IDENTIFICATION AND USE

<b>Item 1 - VEHICLE IDENTIFICATION</b> (Please correct any errors or omissions in the identification of the vehicle)				
Make	Year of model	Registered weight or capacity	State	License number

**NOTE:** Please complete this form whether or not you are still the owner of the vehicle identified in Item 1.

##### **Item 2 - OWNERSHIP OF VEHICLE**

Are you still the owner (or license holder) or lessor of this vehicle?

1  Yes

2  No → When did you sell, trade, or otherwise dispose of it? \_\_\_\_\_

Month \_\_\_\_\_ Year \_\_\_\_\_

##### **Item 3 - ACQUISITION OF VEHICLE**

a. How did you acquire this vehicle?

1  Purchased new

2  Purchased used

3  Leased from someone else

Month \_\_\_\_\_ Year \_\_\_\_\_

b. When did you acquire this vehicle? \_\_\_\_\_

c. During past 12 months was this vehicle leased or rented to others?

1  Yes

2  No

d. How was this vehicle leased or rented?

1  Without driver

2  With driver (or as owner operator)

##### **Item 4 - LEASE CHARACTERISTICS**

a. Was the lessee —

1  Private (non-government)?  
 2  Unit of government?

b. What is the length of lease or rental agreement?

1  Less than 30 days

2  30 days to 1 year

3  1-3 years

4  More than 3 years

c. Does your agreement include —

1  Financing?  
 2  Maintenance?  
 3  Procurement and sale?

##### **Item 5 - CLASSIFICATION OF OPERATOR**

Mark (X) the box which is the most appropriate for your type of operation

Not for hire —

1  Private owner or an individual, or company which just transports its own materials or merchandise. Includes an individual or a business such as a bakery, oil company, or soft drink bottler.

For hire —

2  Interstate - exempt carrier (not required to have an I.C.C. certificate because only exempt commodities are transported, such as: fresh agricultural products, fish, newspapers, or air freight haulage)

3  Interstate - I.C.C. certified contract carrier (carrying the goods of other than the owner by individual contract or agreement)

4  Interstate - I.C.C. certified common carrier (offering service to the general public, usually operating a regularly scheduled service between established terminals over a more or less regular route)

5  Intrastate - operating only within the State of registration (including local carriage, hauling between locations in the same town, city, or suburb)

##### **Item 6 - MAJOR USE OF THE TRUCK OR COMBINATION**

How was the vehicle mostly used during the past 12 months? Mark (X) ONE box

If the vehicle was leased to someone else mark (X) ONE box that describes the business of the person or company to whom you leased the vehicle the longest time.

1  On farm or ranch, or other agricultural activity

2  In forestry or lumbering

3  In mining or quarrying

4  In construction - buildings, or roads

5  In manufacturing, refining, or processing

6  In wholesale trade

7  In retail trade

8  For hire transportation - mixed or general cargo

9  In utilities - telephone, electric, gas, etc.

10  In services - hotel, automobile repair, laundry, funeral services, advertising, plumbing, refuse collection, repair, etc.

11  Daily rental or short term lease, without driver

12  For personal transportation - used in place of an automobile to go from home to work; for outdoor recreation (camping, etc.)

13  Other - If none of the above applies to the use you make of the vehicle, describe the main use of the vehicle here.

##### **Item 7 - PRODUCTS CARRIED**

4. Principal products carried during past 12 months

Mark (X) ONE box which indicates products usually carried by this vehicle

01  Farm products (crops and fruits, raw milk, etc.)

02  Live animals (horses, livestock, poultry or other animals)

03  Mining products

04  Logs and other forest products

05  Processed foods (dressed meat, beverages, dairy products, etc.) or tobacco

06  Textile mill products including apparel and leather goods, etc.

07  Building materials (lumber, millwork, sand, gravel, glass, concrete, etc.)

08  Household goods (moving)

09  Furniture or hardware (not including household goods moving)

10  Paper products, including printing and publishing products

11  Chemicals or related products, including drugs, paints, fertilizers, etc.

12  Petroleum or petroleum products

13  Primary metal products (ingots, billets, pipes, sheets, etc.)

14  Fabricated metal products (except machinery and transportation equipment)

15  Machinery, except electrical

16  Electrical machinery, equipment, and supplies, including household appliances

17  Transportation equipment (motor vehicles, trailers, boats, motorcycles, etc.)

18  Scrap, refuse, or garbage

19  Mixed cargoes

20  Craftsman's vehicle, such as plumbers, carpenters, "traveling workshops," etc.

21  Special equipment such as a crane, compressor, winch, drilling rigs, etc.

22  No products carried (personal transportation)

23  Other - Describe \_\_\_\_\_

##### b. Secondary product carried (if applicable)

Of the list above, what would you consider to be the secondary product most carried by this vehicle?

Code No. \_\_\_\_\_

##### **Item 8 - HAZARDOUS MATERIALS**

a. Was this truck (or combination) used to haul hazardous materials during the past 12 months in quantities large enough to require a placard under the Code of Federal Regulations, Title 49, Transportation?

1  No - SKIP to Item 9

2  Yes - Continue with b

b. Approximately what percent of the time was this unit used to haul hazardous materials?

1  Less than 25%

2  25-49%

3  50-74%

4  75-100%

##### Section B - OPERATIONAL CHARACTERISTICS

###### **Item 9 - BASE OF OPERATION**

a. What was the principal place from which this vehicle was operated?

City or town \_\_\_\_\_

County \_\_\_\_\_

State \_\_\_\_\_

b. What percentage of the miles traveled by this vehicle was within the State named in Item 9a?

1  Below 25%      3  50-74%

2  25-49%      4  75-100%

###### **Item 10 - NUMBER OF TRUCKS, TRUCK-TRACTORS AND TRAILERS OPERATED FROM "BASE OF OPERATION"**

How many trucks, truck-tractors and trailers are you operating from base named in Item 9a?

Total number \_\_\_\_\_

a. Pickups, vans (panels), multi-stops .....

\_\_\_\_\_

b. Other straight trucks .....

\_\_\_\_\_

c. Truck-tractors .....

\_\_\_\_\_

d. Trailers (semi- and full trailers) .....

\_\_\_\_\_

CONTINUE ON REVERSE SIDE

## APPENDIX B. Estimating Unpublished Standard Errors

Standard errors are presented in tables 3 through 7 for both row and column totals. The standard error of an individual table cell may be approximated by:

$$SE(X) = SE(M) \sqrt{\frac{X(N-X)}{M(N-M)}}$$

where:    N = the total number of trucks in the State  
             M = the total number of trucks in the column  
                     (or row)  
             SE(M) = the standard error in the column (or row)  
             X = the number of trucks in the cell

Although either the row or column can be used, it is usually best to use the one with the fewest trucks.

*Example—The total number of trucks in the State is 500.3 thousand. There are an estimated 5.5 thousand agricultural multistops or walk-ins. The column total for "Agriculture" is 110.3 thousand trucks and the estimated standard error is 8.4 thousand. The row total for "Multistop or walk-in" is 27.7 thousand trucks and the estimated standard error is 3.1 thousand.*

Using column figures:

$$SE(5.5) = 8.4 \sqrt{\frac{5.5(500.3-5.5)}{110.3(500.3-110.3)}} = 2.1$$

Using row figures:

$$SE(5.5) = 3.1 \sqrt{\frac{5.5(500.3-5.5)}{27.7(500.3-27.7)}} = 1.4$$

Since the row total of 27.7 thousand is less than the column total of 110.3 thousand, use the row figures and the approximate standard error of 1.4 thousand.

Some exceptions from this procedure will yield improved approximations of the standard error in some cells. Certain rows and columns in the tables are composed predominantly of "large" trucks. Because of the sample design, a cell within a row of large trucks will have a better approximation to the standard error when the row data is used even if the column total is smaller. The same is true for a column of large trucks. Use the smaller of the row or column when both consist of large trucks.

Columns of large trucks:

Table 4—Light-heavy and heavy-heavy.

Table 5—50 to 74,999 miles and 75,000 or more miles.

Table 7—All except single-unit, 2 axles.

Rows of large trucks:

Major Use—Manufacturing and For hire transportation.

Body Type—All except Pickup, Panel truck or van, and Multistop or walk-in.

Annual Miles—50 to 74,999 and 75,000 or more.

Range of Operation—Long range (more than 200 miles).

Gross Weight—All from 16,001 to 19,500 and over.

Lease Characteristics—Leased with driver.

Hazardous Materials Carried—All carrying hazardous materials.

Miles per Gallon—Less than 5 and 5 to 6.9.

Equipment Type, Braking system—Air.

Engine Type and Size

    Diesel, LPG and other Engine—

    Cubic Inch Displacement, Diesel engines—All.

Truck Type and Axle Arrangement—All except Single-unit trucks: 2 axles.

Cab Type—All.

## APPENDIX C. Estimating Standard Errors for Sums, Differences, Ratios, and Percents

Estimates of differences, sums, ratios, and percents may be derived from the data in this publication. Formulas are known for computing the estimated standard errors for all of these estimates, but the quantities needed to use the formulas are not published. This appendix gives some simple methods of approximating the standard errors of these estimates.

The difference A-B or the sum A+B of two estimates A and B in the same table is usually taken only when the estimates A and B are for cells with no trucks in common; i.e., when A and B do not overlap. The following formulas can be used:

Formula C-1

$$SE(A-B) = K_1 \sqrt{SE^2(A) + SE^2(B)}$$

Formula C-2

$$SE(A+B) = K_2 \sqrt{SE^2(A) + SE^2(B)}$$

A is assumed to be larger than B, and the constant  $K_1$  is obtained from appendix table C-1 and the constant  $K_2$  from appendix table C-2. In both tables, A and B are expressed as percents of the total number of trucks in the State.

**Example—** From a state population of 200,000 trucks, estimate A of the number of pickups is 120,000 (60%) with an estimated standard error of 20,000, and estimate B of the number of panels or vans is 40,000 (20%) with an estimated standard error of 10,000.

Using table C-1, when A is 60% and B is 20%,  $K_1$  is 1.26.

Thus:

$$\begin{aligned} SE(A-B) &= SE(120,000 - 40,000) = SE(80,000) \\ &= 1.26 \sqrt{20,000^2 + 10,000^2} = 28,174 \end{aligned}$$

Using table C-2, when A is 60% and B is 20%,  $K_2$  is 63.

$$\begin{aligned} SE(A+B) &= SE(120,000 + 40,000) = SE(160,000) \\ &= .63 \sqrt{20,000^2 + 10,000^2} = 14,087 \end{aligned}$$

The ratio  $\frac{B}{A}$  of two estimates A and B in the same table is usually taken only when the estimates A and B are for cells with no trucks in common, i.e., when A and B do not overlap. The following formula can be used:

Formula C-3

$$SE\left(\frac{B}{A}\right) = K_3 \sqrt{\frac{SE^2(B)}{A^2} + \frac{B^2 SE^2(A)}{A^4}}$$

The constant  $K_3$  is obtained from table C-3, in which A and B are expressed as percents of the total number of trucks in the State.

Using the previous example, approximate the standard error for  $\frac{40,000}{120,000}$ . In table C-3, when A is 60% and B is 20%,  $K_3$  is 1.20.

Thus:

$$\begin{aligned} SE\left(\frac{B}{A}\right) &= SE\left(\frac{40,000}{120,000}\right) = SE(.33) \\ &= 1.2 \sqrt{\frac{10,000^2}{120,000^2} + \frac{40,000^2 \times 20,000^2}{120,000^4}} = .12 \end{aligned}$$

Switching the two estimates, i.e., letting A equal 40,000 and B equal 120,000, a similar calculation approximates the standard error for  $\frac{120,000}{40,000}$ .

$$\begin{aligned} SE\left(\frac{B}{A}\right) &= SE\left(\frac{120,000}{40,000}\right) = SE(3) \\ &= 1.2 \sqrt{\frac{20,000^2}{40,000^2} + \frac{120,000^2 \times 10,000^2}{40,000^4}} = 1.08 \end{aligned}$$

To express a cell estimate B as a percent of its row or column estimate A, the estimate is  $100 \frac{B}{A}$ , (i.e., B is contained in A). The following formula can be used:

Formula C-4

$$SE\left(100 \frac{B}{A}\right) = 100 K_4 \sqrt{\frac{SE^2(B)}{A^2} + \frac{B^2 SE^2(A)}{A^4}}$$

The constant  $K_4$  is obtained from table C-4, in which A and B are expressed as percents of the total number of trucks in the State.

**Example—** From a State population of 200,000 trucks, the row estimate A for the number of pickups is 120,000 (60%) with an estimated standard error of 20,000. The number of pickups in Agriculture, or B, is 40,000 (20%) with an estimated standard error of 10,000.

In table C-4, when A is 60% and B is 20%,  $K_4$  is .85.

Thus:

$$\begin{aligned} SE\left(100 \frac{B}{A}\right) &= SE\left(100 \frac{40,000}{120,000}\right) = SE(33\%) \\ &= 100(.85) \sqrt{\frac{10,000^2}{120,000^2} + \frac{40,000^2 \times 20,000^2}{120,000^4}} = 4.72\% \end{aligned}$$

To express a cell estimate A as a percent of the total number of trucks in the State N, the estimate is  $100 \frac{A}{N}$  and the approximate standard error is:

$$SE\left(100 \frac{A}{N}\right) = \frac{100}{N} SE(A)$$

*Example—Of the 200,000 total trucks in the State, there are 40,000 pickups in Agriculture with an estimated standard error of 10,000.*

$$SE\left(100 \frac{40,000}{200,000}\right) = SE(20\%) = \frac{100}{200,000} 10,000 = 5\%$$

**Thus:**

**Table C-1. Constants K<sub>i</sub> for Use in Formula C-1 for the Difference A-B, A and B Do Not Overlap**

**Table C-2. Constants K<sub>c</sub> for Use in Formula C-2 for the Sum A+B, A and B Do Not Overlap**

Table C-3. Constants  $K_3$  for Use in Formula C-3 for the Ratio  $\frac{A}{B}$ , A and B Do Not Overlap

		A expressed as a percent of the total number of trucks in the State												
		1	5	10	20	30	40	50	60	70	80	90	95	99
